WORK EXPERIENCE

Senior Information Security Engineer

Wells Fargo

2021 - current / Chandler, AZ

- Architected enterprise security monitoring workflows to detect anomalous network activity, strengthening protection across 12 critical banking infrastructure systems.
- Implemented automated threat detection rules within SIEM platforms, reducing average incident triage time by 39% for security operations teams.
- Conducted vulnerability assessments and remediation planning using Python-based automation, lowering unresolved high-risk findings to below 1.2% of scanned assets.
- Collaborated with infrastructure and compliance teams to ***deliver security improvements aligned with quarterly regulatory audit cycles***.

Network Security Engineer

Infosys

2016 - 2021 / Phoenix, AZ

- Designed network security architectures for enterprise clients, securing 20+ segmented network zones supporting large-scale business applications.
- Configured firewall and intrusion detection policies across distributed environments, shortening threat response actions to under 8 minutes per alert.
- Integrated automated configuration validation using Python, reducing manual audit preparation time by 31% for security teams.
- Partnered with infrastructure and client stakeholders to deploy security updates that ***raised internal compliance scores*** to 4.6 / 5 during security reviews.

Software Engineer

Voice Media Group

2013 - 2016 / Phoenix, AZ

- Developed backend services supporting digital publishing workflows, enabling management of 140+ active article entries daily across editorial platforms.
- Refactored content processing logic in Java, decreasing average page rendering time by 27% for high-traffic media pages.
- Implemented automated content validation checks across 5 editorial workflow modules, improving publishing data consistency.
- Collaborated with editorial and product teams to ***ship platform enhancements on a two-week release cadence***.
