WORK EXPERIENCE

Backend Software Engineer

Smartsheet
2023 - current Bellevue, WA

- Engineered backend services supporting collaborative workflow automation, enabling processing of ~13k sheet update events daily across enterprise customer accounts.
- Optimized high-volume service queries in Java, ***lowering average API response latency by 34%*** for dashboard and reporting requests.
- Implemented automated validation checks across 7 core data processing services, strengthening consistency of project tracking and reporting features.
- Collaborated with product managers and frontend engineers to deliver platform enhancements on a two-week sprint cadence.

Associate Software Engineer

Avalara
2020 - 2023 Seattle, WA

- Developed backend features supporting automated tax calculation services used by 150+ e-commerce transactions per minute across client systems.
- Refactored transaction processing modules in C#, shortening tax calculation batch completion time by 19 minutes per reporting cycle.
- Integrated RESTful APIs connecting tax services with 4 external commerce platforms used by partner retailers.
- Partnered with QA and product teams to deploy platform improvements that ***increased internal usability evaluation scores to 4.5 / 5.***

Junior Backend Developer

Redfin
2018 - 2020 Seattle, WA

- Built backend components supporting property listing and search services, enabling indexing of 90+ new property listings daily across regional markets.
- Automated data ingestion scripts in Python, ***reducing manual listing update work by ~4 hours weekly*** for operations teams.
- Investigated inconsistencies in listing synchronization pipelines, resolving issues affecting three partner real estate data feeds.
- Documented backend service configurations and deployment procedures that shortened onboarding time for new developers by one training cycle.
