SKILLS

Technical Documentation

WORK EXPERIENCE

Freelance Software Engineer

Raven Software

2023 - current / Madison, WI

- Developed gameplay support tools and internal utilities used during testing cycles, enabling analysis of 110+ gameplay event logs per session.
- Optimized performance-critical scripts in C++, ***reducing average tool execution time by 26%*** during development builds.
- Implemented automated validation checks across 4 gameplay data modules, improving reliability of debugging and analytics outputs.
- Collaborated with designers and QA testers to deliver feature adjustments on a bi-weekly development cadence.

Junior Software Developer

Exact Sciences

2020 - 2023 / Madison, WI

- Built internal application features supporting laboratory data management, enabling tracking of 130+ diagnostic sample records daily.
- Refactored backend processing logic in Java, ***shortening report generation time by 18 minutes*** per diagnostic batch cycle.
- Integrated RESTful APIs connecting 3 clinical data systems used for reporting and operational workflows.
- Partnered with QA and product stakeholders to deliver application improvements that increased internal usability evaluation scores to 4.5 / 5.

IT Support Technician

Epic Systems Corporation

2018 - 2020 / Madison, WI

- Resolved technical support issues involving workstation configuration, clinical software access, and network connectivity, ***maintaining 94% first-contact resolution*** for internal support tickets.
- Diagnosed recurring system issues across healthcare workstations, reducing average troubleshooting time by 17 minutes per incident.
- Updated and organized troubleshooting documentation for 9 support team members, streamlining the onboarding process and enhancing daily operational efficiency.
- Assisted clinical staff with account provisioning and application access requests, managing ~48 service tickets weekly while meeting SLA response targets.
