EDUCATION

Bachelor of Science
Software Engineering
Rochester Institute of Technology
2010 - 2014
Rochester, NY

SKILLS

- Python (Test Automation)
- Selenium
- API Testing
- CI/CD Test Pipelines
- Quality Assurance Analysis
- Cross-Team Collaboration
- Detail Orientation
- Technical Documentation

WORK EXPERIENCE

Software QA Engineer

DigitalOcean
2019 - current New York, NY

- Designed automated test suites validating cloud infrastructure APIs and deployment workflows, covering 11 critical platform services prior to release.
- ***Reduced regression testing duration by 43%*** by implementing automated test pipelines using Python across staging environments.
- Implemented structured defect tracking practices that improved triage efficiency across 6 engineering teams responsible for platform services.
- Worked closely with product and development teams to validate releases every two weeks, contributing to a 15% reduction in production issues over six months.

Associate QA Engineer

Peloton
2016 - 2019 New York, NY

- Executed functional and integration testing for mobile and web fitness platforms, validating performance across 18 workout and streaming feature scenarios.
- Identified recurring defects in video streaming and session tracking modules, reducing average bug resolution time by 27% through detailed issue documentation.
- Automated UI regression tests using Selenium, ***cutting manual verification effort by 16 hours*** per release cycle.
- Partnered with developers and product managers to release improvements that increased internal quality evaluation scores to 4.5 / 5.

Junior Software Tester

Etsy
2014 - 2016 Brooklyn, NY

- Tested marketplace search and product listing features, validating behavior across 120+ item listing scenarios during QA cycles.
- Documented reproducible bug reports and edge-case scenarios, ***decreasing average debugging time by 14 minutes*** per issue for engineering teams.
- Ensured data consistency and identified issues by testing API responses for 4 backend commerce services, enhancing the reliability of the listing and checkout workflows.
- Conducted release readiness checks for 10+ sprint cycles while maintaining detailed test documentation, assisting 3 QA leads in ensuring high-quality software delivery.
