EDUCATION

Bachelor of Science
Software Engineering
California Institute of Technology
2008 - 2012
Pasadena, CA

SKILLS

Engineering & Systems
C++; Distributed Systems Architecture; Platform Reliability Engineering

Leadership & Strategy
Technical Leadership; Strategic Planning

Collaboration & Communication
Cross-Functional Collaboration; Executive Stakeholder Communication

WORK EXPERIENCE

Director of Software Engineering

Adobe

2021 - current / San Jose, CA

- Directed multi-team engineering efforts for cloud-based digital media services, overseeing delivery across 6 platform teams supporting global product initiatives.
- Scaled distributed service architecture in Java, ***improving system throughput capacity by 44%*** during peak enterprise workloads.
- Established engineering governance practices including architecture reviews and reliability standards, strengthening release readiness across 15 platform components.
- Aligned product and engineering roadmaps with executive stakeholders, coordinating delivery milestones on a quarterly planning cadence.

Senior Engineering Manager

PayPal

2016 - 2021 / San Jose, CA

- Led engineering teams responsible for payment processing infrastructure, managing delivery across 5 high-availability transaction services used by global merchants.
- Optimized transaction orchestration services in Java, reducing settlement processing latency by 31% during high-volume transaction periods.
- Implemented platform reliability monitoring frameworks that ***decreased incident response times to under 9 minutes*** per production alert.
- Partnered with compliance, product, and infrastructure leaders to deliver platform improvements that raised internal service reliability scores to 4.7 / 5.

Principal Software Engineer

Intel

2012 - 2016 / Santa Clara, CA

- Architected system-level software components supporting hardware validation platforms, enabling automated testing across 120+ hardware simulation scenarios.
- Refactored performance-critical modules in C++, reducing simulation ***runtime by 22 minutes*** per validation cycle for engineering teams.
- Developed integration layers connecting firmware test tools with 4 internal diagnostic systems used in hardware verification pipelines.
- Documented platform architecture guidelines and development practices that shortened onboarding time for new engineers by one development sprint.
