Proven Associate Software Engineer with 4-year Computer Science degree and 1+ years of experience. As a dedicated problem solver, I display an expert skill in JavaScript and supporting languages/libraries/frameworks that solve real-world problems through code. Through my time at Boeing, I have gained further hands-on experience in industry-standard development, which I'm looking to apply to a growing business like Amazon.

WORK EXPERIENCE

Boeing

Associate Software Engineer

Mountain View, CA | July 2024 - current

- Developed software components supporting internal aerospace testing tools, enabling analysis of 130+ system telemetry records daily during validation cycles.
- Optimized data processing routines in C++, ***reducing simulation analysis time by 28%*** for engineering review workflows.
- Implemented automated validation checks using Python across 5 system monitoring modules, reducing reporting errors by 15%.
- Collaborated with systems engineers and QA teams to deliver software updates aligned with quarterly testing milestones.

PROJECTS

Streamer Highlighter

- Designed a video processing tool that detects key gameplay moments from recorded streams, enabling automatic tagging across 40+ gameplay highlight segments per session.
- Built backend processing logic in Python, ***lowering highlight detection processing time by 19 minutes*** per recording during testing.
- Integrated an intuitive web interface using React, allowing creators to review and export clips across 3 major streaming formats.
- Documented system architecture and usage workflows that supported monthly feature updates based on user feedback.

Hospitality Highlighter

- Developed a web-based platform that identifies and highlights trending hospitality venues from user reviews, ***aggregating 150+ location reviews daily*** for analysis.
- Implemented data processing pipelines using Python, shortening review analysis time by 24 minutes per dataset cycle.
- Built API integrations connecting 4 external review data sources to maintain up-to-date venue insights.
- Published project documentation and deployment instructions that enabled weekly feature iterations during development.

SKILLS

- Python
- C++
- React
- REST API Development
- Analytical Problem Solving
- Cross-Functional Collaboration
- Technical Documentation
- Project Ownership

EDUCATION

Bachelor of Science
Computer Science
San Jose State University
2020 - 2024
San Jose, CA
