EDUCATION

M.S.
Computer Science
University of Chicago
2019 - 2021
Chicago, IL

B.S.
Computer Science
University of Pittsburgh
2015 - 2019
Pittsburgh, PA

SKILLS

- Python
- REST API Development
- SQL
- WebSocket Integration
- Analytical Problem Solving
- Cross-functional Collaboration
- Technical Documentation
- Agile Development Practices

WORK EXPERIENCE

Python Developer

DoorDash

September 2022 - current Detroit, MI

- Developed backend services supporting order routing and delivery tracking workflows, enabling logistics systems to process ~11k order status events daily across regional markets.
- Optimized data retrieval logic in Python, cutting average API response latency by 36% for restaurant and courier status updates.
- Implemented validation checks within order ingestion pipelines, ***improving operational data consistency*** across 5 internal fulfillment services.
- Partnered with product and infrastructure teams to ship delivery optimization features on a bi-weekly release cadence, improving rollout speed for dispatch updates.

Python Developer Intern

Knewton

April 2021 - April 2022 Chicago, IL

- Built backend scripts supporting adaptive learning analytics, enabling educators to track engagement across 2k+ active student sessions.
- Automated data-cleaning routines in Python, ***reducing manual dataset preparation time*** by ~4 hours per week for the research team.
- Investigated inconsistencies in recommendation engine outputs, resolving discrepancies affecting three course personalization modules.
- Documented API endpoints and data pipelines that shortened onboarding time for new engineering interns by one training workshop.

PROJECTS

Cryptocurrency Price Tracker

Creator

- Designed a web-based application that aggregates live cryptocurrency prices from public exchange APIs, tracking 120+ digital assets in a unified dashboard.
- Implemented alert logic for threshold-based price notifications, ***enabling monitoring across multiple user-defined portfolios***.
