WORK EXPERIENCE

Software Quality Engineer

Electronic Arts (EA)

2023 - current / Redwood City, CA

- Designed automated test frameworks validating gameplay systems and backend services, covering 13 critical game engine modules prior to release.
- Reduced regression testing duration by 46% by implementing automated test pipelines using Python across build validation environments.
- Implemented structured defect triage workflows that ***improved bug resolution efficiency across 5 development teams*** working on multiplayer features.
- Collaborated with game designers and engineers to support release readiness on a two-week sprint cadence, strengthening production stability.

Software Developer in Test (SDET)

Microsoft

2021 - 2023 / Sunnyvale, CA

- Developed automated validation tools for enterprise application services, enabling testing across 160+ functional test scenarios during build verification cycles.
- Optimized automated test execution in C#, ***cutting average test suite runtime by 27 minutes*** per pipeline run.
- Integrated API-level testing across 4 distributed service components, improving detection of data consistency defects before production release.
- Partnered with development and QA teams to implement quality improvements that raised internal platform reliability scores to 4.6 / 5.

Automation Tester

LinkedIn

2019 - 2021 / Sunnyvale, CA

- Built automated UI test scripts supporting validation of messaging and profile features, covering 120+ user interaction scenarios across web applications.
- Refactored regression test suites using Selenium, ***reducing manual verification effort by 18 hours*** per release cycle.
- Investigated failures in authentication and messaging pipelines, resolving issues affecting three core platform services.
- Documented testing frameworks and execution procedures that shortened onboarding time for new QA engineers by one training cycle.
